## Getting started

**PC Brother Registry Cleaner Free** is an easy-to-use application that uses a simple but useful interface to make high-performance registry cleaning.

1. This window displays scanned items, includes: COM components, file types, programs, shared dlls, help files, history list, fonts, shortcuts, sounds, start menu and startup items.
2. "Select All", "Select None" and "Recommended" are hotkeys for users to select desired items to clean.

1. Scan: Click the "Scan" to find selected items that need to clean.
2. Clean: Click the "Clean" to delete all scanned items.
3. Restore: Click the "Restore" can help users undo changes made.

If you have any questions about our application, please feel free to contact us: [support@pc-brother.com](mailto:support@pc-brother.com)

## Scan

**Scan:** Offers a smart feature for optimizing system. It can find items that need to be cleaned, and keeps system away from invalid keys.

Normally, **PC Brother Registry Cleaner Free** performs complete scans. If you check "Recommended", notice that some of the registry items become unchecked. To select the sections you would like to scan, check the corresponding boxes.

The following explains what each section of the registry relates to:

- **COM components:** PC Brother Registry Cleaner Free will search for currently installed COM objects. PC Brother Registry Cleaner Free performs complete analysis of COM sections as they are interlinked and interdependent.
- **Programs:** PC Brother Registry Cleaner Free will search for the programs settings of the current user for invalid references.
- **Help Files:** All applications following Microsoft standards must register their help files to the Windows Registry. PC Brother Registry Cleaner Free looks for missing, erroneous or orphaned links.
- **Fonts:** Windows stores each reference to a font in the registry. Some of the installed font faces may not appeal to the user and consequently are removed, thus failing to register changes within the Windows Registry. If the font section is not cleaned regularly, Windows can start showing different font faces instead of those expected/desired.
- **Sound:** Windows provides a facility to associate an application event with a sound, for example, the "ding dong" sound you hear when an application presents a message. If a sound file used for an event is missing, Windows or other applications are unable to handle the event resulting in unexpected occurrences such as playing irregular sounds. PC Brother Registry Cleaner Free repairs references to sounds and other events those are missing or inexistent.
- **Startup Items:** Some applications may be configured to run as soon as you start up Windows while others may automatically run at start up without the need for user configuration (e.g., schedulers, Anti-spyware guards and Windows Update). As applications register themselves with the Windows Registry, they indicate references to the processes and locations that the operating system needs to run upon start up. PC Brother Registry Cleaner Free

analyses the Windows Registry to repair these references.

## Clean

**Clean:** This effective features can maximize system response time, save system memory (smaller registries consume less memory) and enhance system boot-up time.

1. After clicking the "Clean" button, this question window will pop-up to inform you that application will back up registry data automatically before cleaning.
2. After finishing cleaning, PC Brother Registry Cleaner Free will show you a report of registry cleaning.

If you have any questions about our application, please feel free to contact us:  
[support@pc-brother.com](mailto:support@pc-brother.com)

## Restore

**Restore:** You can restore a registry configuration to a former saved and backed up version.

Backed up Items (2 Items):

Description	Count	Size	Path
Description: 2010-7-21 15...	187	43.97 KB	E:\Program Files\RegistryCleaner\Data\WRORC\2010-
Description: 2010-7-21 17...	50	12.02 KB	E:\Program Files\RegistryCleaner\Data\WRORC\2010-

1. Click the "Restore" button, then the restore window will popup.
2. To restore a backup file, click the desired file in the backup file list and then click the "Restore" button.
3. To delete a backup file, click the desired file in the file list and then click the "Delete" button, or just click "Delete All" button to delete all.

# Company Information

## VeeCan Software Ltd.

**VeeCan Software Ltd.** is a leading PC company specializing in the technology of PC protection and optimization. We are one of the first PC optimization companies to offer hardware maintenance service, and make it possible for users to optimize their PC system and download their desired software simultaneously.

We are dedicated to thinking helping our customers through comprehensive evaluations of the using habits of computer, as well as through the authoritative websites' edit report. VeeCan helps both experienced and beginner customers, who want to make the most of their PC systems. We provide our customers with solutions optimizing their computers and also offer additional valuable services to our customers.

## Frequently Asked Questions

### The most frequently asked questions are as follows

1. Is my PC free of Registry problems?\_  
[Answer](#)
2. How do I know whether I have Registry problems? \_  
[Answer](#)
3. I have attempted to download the software many times, but each time the downloaded file is bigger than the file size listed on the web site. Why am I having this problem? \_  
[Answer](#)
4. Do you sell a version of PC Brother Registry Cleaner Free for the Mac? \_  
[Answer](#)

### Is my PC free of Registry problems?

Statistics show that about 94% of computers have corrupt and possibly harmful files. On average, almost each PC will have about 150+ errors on them due to corrupt or missing registry entries.

Although a closer analysis is needed (download PC Brother Registry Cleaner Free Free for a free scan), it is highly probable that even though your computer system is new or you are not encountering any visible serious problems, your computer already has some problems in the registry.

The more frequent symptoms of registry problems include:

- Frequent error messages
- Slow start-ups
- Sluggishness
- Declining performance
- System stalls
- Severe degradation in operating speed

- Unstable and frequent application errors and crashes
- At times, even an inability to start Windows

### **How do I know whether I have Registry problems?**

Changes are not necessary when you have a new system even though within a very short period, your registry will quickly grow as you install and remove software and hardware. Usually, within six months, your Windows Registry will become highly fragmented with regular use; and, if you add and remove software and hardware frequently or often effect changes within your system, your registry may corrupt and be full of errors.

Changes to registry entries modify the size of the files where the information is stored.

Registry fragmentation occurs because certain processes continually use the registry to incrementally modify the same values in the corresponding registry hives. Microsoft warns, for example, that this fragmentation, in certain cases, may be excessive. File sizes may eventually exceed the Registry Size Limits imposed by Windows and this will cause subsequent modifications to the registry to fail with resultant errors, slowdowns and crashes.

### **I have attempted to download the software many times, but each time the downloaded file is bigger than the file size listed on the web site. Why am I having this problem?**

This problem seems to occur only when using a download manager with specific network conditions. If at all possible, you will have better results by downloading the software normally through your browser.

### **Do you produce a version of PC Brother Registry Cleaner Free for the Mac?**

No. PC Brother Registry Cleaner Free Soft Development Team does not develop Macintosh software at this time. Unfortunately, as we are not familiar with the Macintosh software market, we do not know of a solution to recommend for similar operations on the Mac platform.

## Glossary

### **Programs**

Programs are designed for end users such as word processors, spreadsheets, Customer Relationship Management and database software.

### **Backup**

The procedure that allows you to store your data on a separate storage medium so that you can reproduce the data with 100% accuracy if and when data loss takes place.

### **COM Components**

Microsoft defines COM or Component Object Model as "a platform-independent, distributed, object-oriented system for creating binary software components that can interact. COM is the foundation technology for Microsoft's OLE (compound documents), ActiveX® (Internet-enabled components), as well as others".

### **Custom Controls**

A custom control is subsequently a control that is non-standard to Windows or proprietary to the application that is being installed. An example, in a car racing game, a custom control would be the speedometer. It is not a native Windows control but is required by the application (car racing game).

### **File Associations**

A file association allows you to control certain aspects of how the Shell's treats different file types.

### **File Extensions**

In such operating systems as Windows, one or several letters (generally three) at the end of a filename. Filename extensions usually follow a period (dot) and indicate the type of information stored in the file. Common file extensions include pdf, .exe, .gif, .jpg, .tif, .mp3, .avi, .doc, .xls, and .zip.

### **File System**

A system for organizing directories and files, generally in terms of how it is implemented in the disk operating system.

### **Objects**

An object is a software bundle of variable items of data (state) and related behaviors

implemented through methods. A method is function (subroutine) associated with an object. For example, an event is a common object used in window systems to represent the action of a user pressing a mouse button or a key on the keyboard.

## **Processes**

While the term "program" refers to an executable code (the exe file for MS Word, for example), a process is a program that is being executed. When you start a program in Windows, the executable will be loaded into RAM. Windows will then add the new process to its internal process list and make sure the process receives some CPU time as well as memory and other resources.

## **Registry**

The Windows registry is a central database of information needed to configure your computer system for general settings and preferences, software applications, and hardware drivers and devices. Keeping your registry in a good state of repair and conducting regular maintenance is imperative because the registry contains important data that is used all the time during system operation.

## **Registry Fragmentation**

Registry fragmentation is a phenomenon similar to fragmented hard drives. Your computer will slot new pieces of data in empty areas of your registry. If the file is too big for the slot, your computer will break it up and put a piece in one slot and another elsewhere. This creates gaps, wasted space and increase the probability of corruption of your registry.

## **PC Brother Registry Cleaner Free Software**

PC Brother Registry Cleaner Free software cleans all your registry redundant data including empty folders and invalid keys.

## **Restore**

The process of reinstating a set of data to its original state before the data loss or related incident has occurred.

## **Shortcuts**

Special types of files that contain preset links to various single files, folders and devices. Windows has a series of shortcuts placed on the computer desktop to allow access to files and devices at one click of a button.

## **User Interface**

The menu and general instruments available for the user to communicate with the program. In PC Brother Registry Cleaner Free the user interface is designed to be highly intuitive and exceptionally simple to use.

## **Virtual Devices**

Virtual devices are also referred to as a virtual peripheral - a virtual device mimics a physical hardware device, essentially, "tricking" your system into believing that a

device exists when actually it does not. For example, fax software can act as a virtual printer. When you want to send a document to your fax modem, you would print it "normally" to the fax/modem (virtual printer) device, which then sends information to another fax / modem or fax machine instead of your printer actually printing the file.
